PROJECTS

messageAlt React.js, Redux, HTML5/CSS, JSON.server   https://github.com/AurlinD/messageAlt
Message Board that has google authentication/authorization for users to log into. Users can create/edit/delete/ their own messages and reply to others user messages. All messages are stored in a database using RESTful principles

Seasons React.js, HTML5&CSS   https://github.com/AurlinD/hemisphereSeason
Checks your geolocation to let you know if it is summer or winter in your region with a tailored message.

Image Finder React.js, HTML5/CSS   https://github.com/AurlinD/pics
Displays a search bar for user to type into and see a variety of different images such as trees, snow, water in an aesthetically pleasing format

Portfolio Website HTML5 & CSS   https://github.com/AurlinD/Portfolio
A website I have designed to show all my projects. Created and styled from scratch

Weather Swift   https://github.com/AurlinD/Weather-App
An IOS app made via Swift that checks your location to display the forecast of the current day through an API request. Display background changes depending on forecasted weather
